

CSE 471: MACHINE LEARNING

Learning from Examples

Outline

- Forms of learning
- Model Selection and Optimization
- The Theory of Learning
- Linear Regression and Classification
- Nonparametric Models
- Ensemble Learning
- Developing Machine Learning Systems

Machine Learning

- A computer program is said to learn from
 - ▣ experience E (not in traditional algorithm e.g. Dijkstra algorithm)
- with respect to some class of
 - ▣ task T and performance measure P if its
 - ▣ performance at tasks in T
 - ▣ as measured by P
 - ▣ improves with experience E (not in traditional algorithm)

Material to cover in next 7 weeks

- Book

- Artificial Intelligence A Modern Approach (4th Edition)

- Stuart J. Russell and Peter Norvig

- Misc. notes/blog posts

- Content

- See course outline

Learning from Examples

- Supervised Learning
 - ▣ Labeled observations
 - ▣ Classification vs. Regression
- Unsupervised Learning
 - ▣ Unlabeled observations
 - ▣ Clustering

Learning from Examples

- Reinforcement Learning
 - Reward & punishment scheme
 - Example: Learning from a chess game
 - Win → Reward
 - Loss → Punishment
 - Agent itself determines what actions were fruitful!

Datasets & Validations

- Datasets

- Training set
- Validation set
- Test set

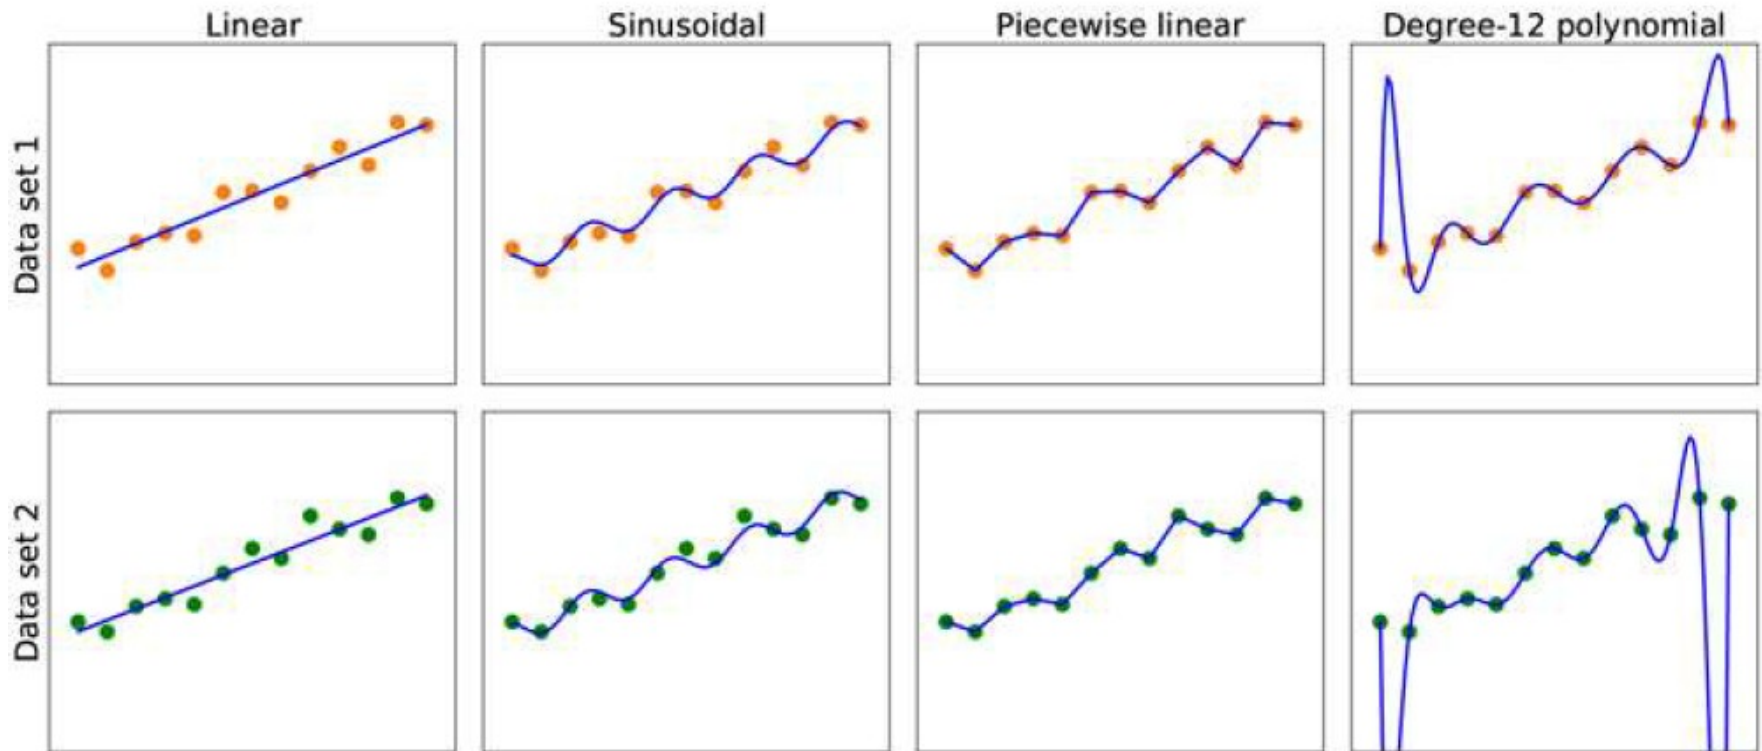

- Validations

- Validation Test
- K-fold cross validation Test
- Independent Test

The hypothesis space (H)

- How do we choose a hypothesis space
 - ▣ Prior knowledge
 - ▣ Exploratory data analysis
 - Visualizations
 - histograms
 - scatter plots
 - Box plots
 - Etc.
- Consistent Hypothesis
 - ▣ Gives correct answer for the data point

The hypothesis space (H)

Finding hypotheses to fit data. **Top row:** four plots of best-fit functions from four different hypothesis spaces trained on data set 1. **Bottom row:** the same four functions, but trained on a slightly different data set (sampled from the same $f(x)$ function).

Example: Will we wait for a table?

1. **ALTERNATE**: whether there is a suitable alternative restaurant nearby.
2. **BAR**: whether the restaurant has a comfortable bar area to wait in.
3. **FRI/SAT**: true on Fridays and Saturdays.
4. **HUNGRY**: whether we are hungry right now.
5. **PATRONS**: how many people are in the restaurant (values are *None*, *Some*, and *Full*).
6. **PRICE**: the restaurant's price range (\$, \$\$, \$\$\$).
7. **RAINING**: whether it is raining outside.
8. **RESERVATION**: whether we made a reservation.
9. **TYPE**: the kind of restaurant (French, Italian, Thai, or burger).
10. **WAITESTIMATE**: host's wait estimate: 0 – 10, 10 – 30, 30 – 60, or >60 minutes.

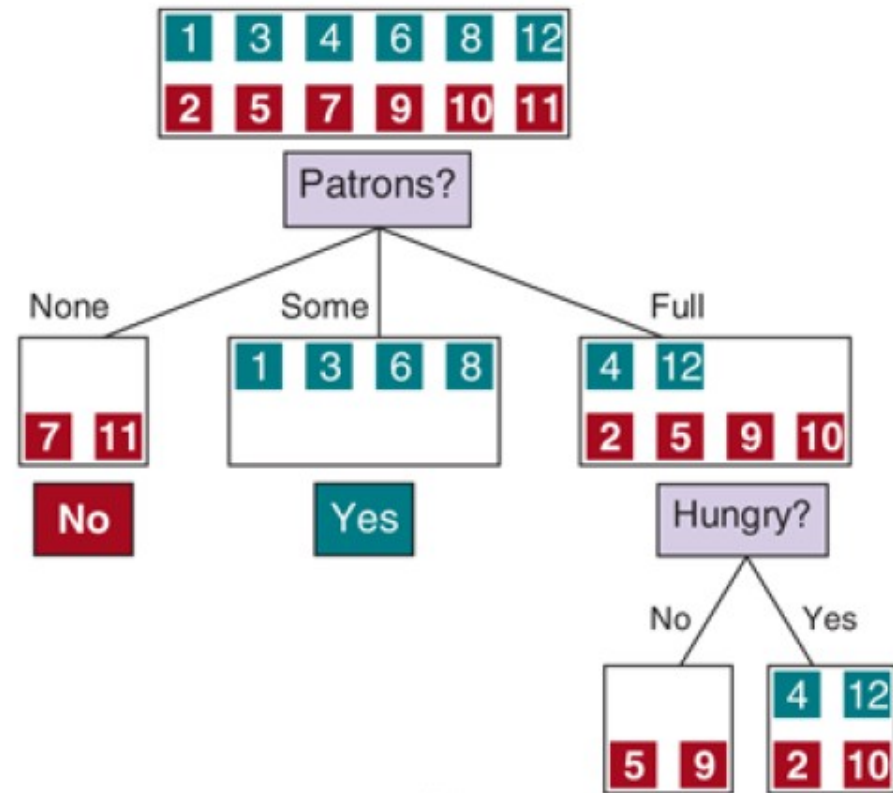

Will we wait for a table?

Example	Input Attributes										Output
	<i>Alt</i>	<i>Bar</i>	<i>Fri</i>	<i>Hun</i>	<i>Pat</i>	<i>Price</i>	<i>Rain</i>	<i>Res</i>	<i>Type</i>	<i>Est</i>	<i>WillWait</i>
x_1	<i>Yes</i>	<i>No</i>	<i>No</i>	<i>Yes</i>	<i>Some</i>	<i>\$\$\$</i>	<i>No</i>	<i>Yes</i>	<i>French</i>	<i>0–10</i>	$y_1 = \text{Yes}$
x_2	<i>Yes</i>	<i>No</i>	<i>No</i>	<i>Yes</i>	<i>Full</i>	<i>\$</i>	<i>No</i>	<i>No</i>	<i>Thai</i>	<i>30–60</i>	$y_2 = \text{No}$
x_3	<i>No</i>	<i>Yes</i>	<i>No</i>	<i>No</i>	<i>Some</i>	<i>\$</i>	<i>No</i>	<i>No</i>	<i>Burger</i>	<i>0–10</i>	$y_3 = \text{Yes}$
x_4	<i>Yes</i>	<i>No</i>	<i>Yes</i>	<i>Yes</i>	<i>Full</i>	<i>\$</i>	<i>Yes</i>	<i>No</i>	<i>Thai</i>	<i>10–30</i>	$y_4 = \text{Yes}$
x_5	<i>Yes</i>	<i>No</i>	<i>Yes</i>	<i>No</i>	<i>Full</i>	<i>\$\$\$</i>	<i>No</i>	<i>Yes</i>	<i>French</i>	<i>>60</i>	$y_5 = \text{No}$
x_6	<i>No</i>	<i>Yes</i>	<i>No</i>	<i>Yes</i>	<i>Some</i>	<i>\$\$</i>	<i>Yes</i>	<i>Yes</i>	<i>Italian</i>	<i>0–10</i>	$y_6 = \text{Yes}$
x_7	<i>No</i>	<i>Yes</i>	<i>No</i>	<i>No</i>	<i>None</i>	<i>\$</i>	<i>Yes</i>	<i>No</i>	<i>Burger</i>	<i>0–10</i>	$y_7 = \text{No}$
x_8	<i>No</i>	<i>No</i>	<i>No</i>	<i>Yes</i>	<i>Some</i>	<i>\$\$</i>	<i>Yes</i>	<i>Yes</i>	<i>Thai</i>	<i>0–10</i>	$y_8 = \text{Yes}$
x_9	<i>No</i>	<i>Yes</i>	<i>Yes</i>	<i>No</i>	<i>Full</i>	<i>\$</i>	<i>Yes</i>	<i>No</i>	<i>Burger</i>	<i>>60</i>	$y_9 = \text{No}$
x_{10}	<i>Yes</i>	<i>Yes</i>	<i>Yes</i>	<i>Yes</i>	<i>Full</i>	<i>\$\$\$</i>	<i>No</i>	<i>Yes</i>	<i>Italian</i>	<i>10–30</i>	$y_{10} = \text{No}$
x_{11}	<i>No</i>	<i>No</i>	<i>No</i>	<i>No</i>	<i>None</i>	<i>\$</i>	<i>No</i>	<i>No</i>	<i>Thai</i>	<i>0–10</i>	$y_{11} = \text{No}$
x_{12}	<i>Yes</i>	<i>Yes</i>	<i>Yes</i>	<i>Yes</i>	<i>Full</i>	<i>\$</i>	<i>No</i>	<i>No</i>	<i>Burger</i>	<i>30–60</i>	$y_{12} = \text{Yes}$

How to select the best attribute?

(a)

(b)

Choosing attribute tests

Entropy: $H(V) = \sum_k P(v_k) \log_2 \frac{1}{P(v_k)} = - \sum_k P(v_k) \log_2 P(v_k).$

***$B(q)$ is the entropy of a Boolean random variable
that is true with probability q***

$$B(q) = -(q \log_2 q + (1 - q) \log_2 (1 - q)).$$

***The entropy of the output variable
on the whole set***

$$H(\text{Output}) = B\left(\frac{p}{p + n}\right).$$

Choosing attribute tests

$$\textit{Remainder}(A) = \sum_{k=1}^d \frac{p_k + n_k}{p + n} B\left(\frac{p_k}{p_k + n_k}\right).$$

Information Gain

$$\textit{Gain}(A) = B\left(\frac{p}{p + n}\right) - \textit{Remainder}(A).$$

The learning curve

Confusion Matrix

https://en.wikipedia.org/wiki/Confusion_matrix

Performance Metrics

- Accuracy,
- Sensitivity (Recall)
- Specificity
- Precision
- F1 -score
- MCC
- Etc.
